## GENERIC MATLAB SANDBOX

Here is a blank script for you to build your own communication system. This is an optional task and will not be graded. You can try to call any functions introduced by previously expired lab tasks.

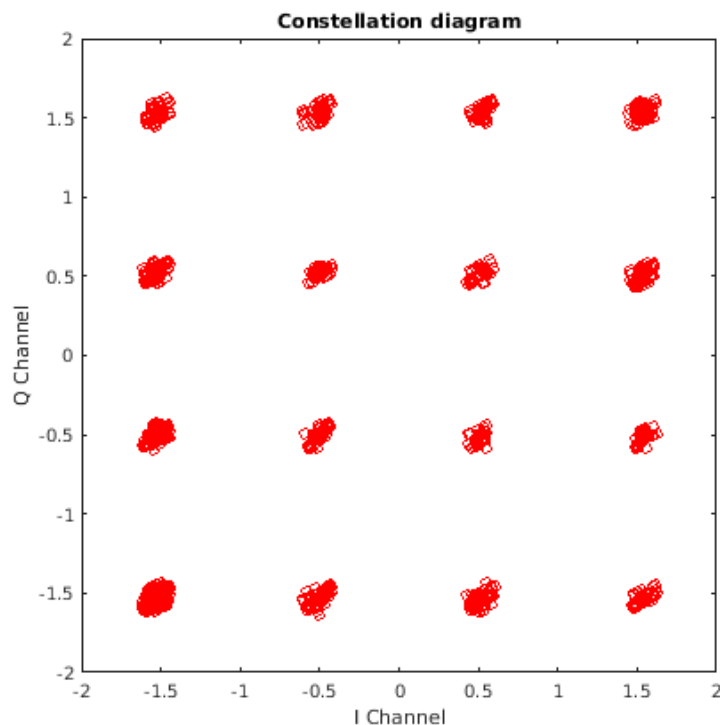

```

68
69 for c=1:NMSG
70     % compare the messages
71     disp(['Original Message ' num2str(c) ' :']);
72     disp(textmsg{c});
73     disp(['Recovered Message ' num2str(c) ' :']);
74     % filter non-printing characters
75     filtmsg = char(32*ones(size(msg{c})));
76     ind = find(((msg{c}>31) & (msg{c}<127)) | (msg{c} > 8) & (msg{c} < 127));
77     filtmsg(ind) = msg{c}(ind);
78     disp(filtmsg);
79     disp(['Number of Bit Errors: ' num2str(sum(textmsg{c}~=filtmsg)]);
80     disp(' ')
81 end
82
