LAB 1 TASK 4 (SANDBOX)

In this task, you create separate dictionaries for black and white runs based upon their run-length distributions using the Huffman code algorithm.

```
1 % Load the input image
2 lorem_img = imread('lorem_img.png');
3
4 % display the raw image
5 figure(1);
6 imshow(lorem_img);
7 title('Original image');
8
9 % run-length encode
10 run_length_code = runlength_encode(lorem_img);
11 % convert the binary array into an decimal array of runs
12 runs = bin2decArray(run_length_code);
13
14 % huffman encode
15 % set the histogram
16 rlen_list = [0:10.255]:
```

Correct
